CLINICAL COMMENTS

1. **Mild normocytic anaemia** — further investigation (iron studies, B12, folate) recommended.
2. **Elevated WBC with neutrophilia** — suggests possible bacterial infection or inflammatory process. Clinical correlation advised.
3. **Mildly elevated liver enzymes (ALT/AST)** — lifestyle review and repeat LFT in 4–6 weeks.
4. **Borderline dyslipidaemia** — dietary modification and repeat lipid panel in 3 months.
5. **HbA1c 5.9%** — pre-diabetic range. Lifestyle intervention and glucose monitoring recommended.
